임 à 엄 Op Dp ò 셤 à δ 원 ò ٠.-The invention relates to an isolated polypeptide (NoVX) a mature form of NoVX, a NoVX variant (differing by no more than 15%), the nucleotide concoling NoVX (or its complement, fragment or variant). NoVX is NoV1-14, 154, 15b, 16a, and 16b. The NoVX polypeptide, nucleic acid encoding it and antibody against it, are useful for treating or preventing (e.g. by gene therapy) a NoVX-associated disorder in humans, e.g. cardiomyopathy, atheroscierosis, a disorder related to cell signal processing and metabolic pathway modulation, diabetes or cancers. The NoVX polypeptide are metabolic pathway modulation, diabetes or cancers. The NoVX polypeptide or predisposition to the diseases. The NoVX nucleic acid and polypeptide are specially useful in therapeutic or prophylactic applications for cancers (e.g. adenocarcinoma, lymphoma, prostate cancer or uterus or sociated with aberrant NoVX expression or activity, e.g. cancers; immunodeficiency syndrome (AIDS), asthma, crohn's disease, hypertension, congenital heart defects, multiple scleroais, inflammation or Albright preditary osteodystrophy and many other diseases listed in the conditions. The DNA encoding the protein is useful in denethon assays, or the charting the conditions. This is also useful in detection assays, or for developing a powerful assay system for functional analysis of various human disorders, as well as in diagnostic applications. The present constitutions in the present constitutions. The DNA protein diagnostic applications or proprious applications or human disorders, as well as in diagnostic applications. The present constitutions or functional analysis of various constitutions and the defense and developing the defense and developed and developed and devel 120 100 697 757 517 577 637 457 80 40 9 20 ArgGluLysAlaGluGluLeuLeuLeuLeuProGlyAsnProGlyGlyAlaPheLeuIle GGCAGTTTCCCGGCCAGGTGGCCCGGCCGAGCTGTCGCTGAGACTCGGGGAGCCATTGACC IleValSerGluAspGlyAspTrpTrpThrValLeuSerGluValSerGlyArgGluTyr Arcercrereaeeareeaecreereeaeereerererereaeaereeaeeaerer AsnileProSerValHisValGlyLysValSerHisGlyTrpLeuTyrGluGlyLeuSer GlnGlyGlnGlyProValThrMetGluAlaGluArgSerLysAlaThrAlaValAlaLeu GlySerPheProAlaGlyGlyProAlaGluLeuSerLeuArgLeuGlyGluProLeuThr MetGlySerLeuProSerArgArgLysSerLeuProSerProSerLeuSerSerVal Sequence 1183 BP; 251 A; 359 C; 333 G; 240 T; 0 U; 0 Other; 1183 261 0 0 0 Length:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GECAGTITICCCGGCAGGTGGCCCCGGCCGAGCTGTCGCTGAGACTCGGGGAGCCCATTGACC 180
                                    The invention comprises the amino acid and coding sequences of modulator of antigen receptor signalling (MARS) proteins. The MARS protein is a putative tumour suppressor gene and exhibits structural and sequence similarity to the Scr-like adaptor protein (SLAP). The MARS DNA and protein sequences of the invention are useful for the treatment of myeloid malignancies (e.g. acute myelogenous leukaemia) autoimmune disorders, immunosuppression, myelogenous leukaemia) autoimmune malignancies related to the de-regulation of tyrosine kinases (e.g. breast cancer). The present cDNA sequence encodes a human MARS protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       09

The present sequence encodes the human Src-like inhibitory molecule (SLIM) protein (I). The present invention describes a SLIM protein comprising an N-terminal myristylation sequence, an N-terminal SH3 domain which can bind to Cbl, or comprising an N-terminal SH3 domain which can bind to Cbl, or comprising an N-terminal myristylation sequence and an N-terminal SH2 domain which is unable to bind to Cbl. (I) has antiinflammatory, immunosuppressive and anti-HTV activities, and can be used as a modulator of lymphocyte activation, and of ubiquitination of a Cbl target protein, and in gene therapy. (I) is useful for screening a bioactive agent capable of binding the SIM N standard or in the streament of conditions which involves this function or

The invention relates to a substantially purified human SH2/SH3-domain-
containing adapter polypeptide, termed Src-Like Adapter Protein-2 (SLAP-
containing adapter polypeptide, termed Src-Like Adapter Protein-2 (SLAP-
COT I invention is useful for treating an immune disorder involving
the invention is useful for treating or inhibitors of the invention is
cuseful for screening for antagonists or inhibitors of the invention of
the SLAP-2 with cellular signalling compounds, for diagnosting, treating or
preventing diseases or disorders associated with aberrant or uncontrolled
collular signal transduction, for determining those cellular signalling
molecules which associate with hSLAP-2 and which provide critical signals
collular signal transduction, for determining those cellular signalling
collular signal transduction; for determining those cellular signals
collular signal transduction is useful in screening assays to identity and
detect candidate bioactive agents that modulate hSLAP-2 bioactivity, for
corditional use to treat autoimmune diseases which may be caused by
hyperactivated B cells, as well as to treat diseases which may be caused
by hyperactivated C cells, in addition to other immune system related
conditions, diseases, or diseases, and conditions, rheumatoid arthritis,
conditions, diseases, or diseases and conditions, rheumatory bowel disease (Crohn's
conditions, diseases, and conditions, rheumatory disease (Crohn's
maxt cells or eosinophils, autoimmune diseases such as systemic lupus
cychematorus and multiple solerosis, pulmonary diseases including
cathma, acute respiratory distress syndrome, and chronic obstructive
collinant disorder, tissue/ organ rejection and cancer. The invention is
cuseful in gene therapy. The present sequence is human SLAP-2 conA
                                                                                                                                                                                                                                         SLAP-2, immune disorder; signal transduction, autoimmune disease, cancer; neoplasm; inflammation disorder; rheumatoid arthritis; osteoarthritis; postrasis; rhinitis; allergy; inflammatory bowel disease; gene therapy; Crohn's disease; systemic lupus erythematosus; tissue/organ rejection; multiple sclerosis; asthma; acute respiratory distress syndrome; pulmonary disorder; dermatological; neuroprotective; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel substantially purified human SH2/SH3-domain-containing adapter polypeptide, termed Src-Like Adapter Protein-2, useful for therapeutic intervention in immunological and inflammatory disorders and cancer.
                                                                                                                                                                                                                      SH2/SH3-domain-containing adapter; Src-Like Adapter Protein-2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 2567 BP; 611 A; 741 C; 666 G; 549 T; 0 U; 0 Other

Claim 5; Page 4692-4693; 5507pp; English

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic, hepatotropic, vulnerary; antiparial antiparkinsonian; nootropic; neuroprotective; osteopathic; antiporvalsant; antiparkinsonian; nootropic; antidabetic; hypotensive; dermatological; immunosuppressant; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antibacterial; antivingal; antithewmatic; antithyroid; and antianaemic. The antiviral; antithugal; antithewmatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an OKFX-associated disorder. The nucleic acids can be used to express OKFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft ve host disease, cardiovascular disease, disorders, osteoarthritis, graft ve host disease, cardiovascular disease, storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartiage damage, nocturnal haemoglobinic, and antinifamment to coagulation; to inhibit thrombosis; and as a contraceptive enhance

The present invention relates to novel human coding sequences (ABQ99268-ABQ99608) and proteins (ABP64682-ABP65022). The sequences are useful in therapeutic, diagnostic and research methods. The polynuclectides may be used in the field of molecular biology as hybridisation probes, primers for PCR, for chromosome and gene mapping, for the recombinant production of protein, or in generation of anti-sense DNA or RNA. The polynucleotides are useful in diagnostics as expressed sequence tags (STTS) for identifying expressed genes or for physical mapping of the human genome. The proteins may be used as molecular weight markers, or as nutritional sources or supplements. The proteins may be used to maintain and expensive of bio-pharmaceuticals or the development of plusplantation, and explained to research for re-engineering damaged or ties development of bio-sensors. The useful for re-engineering damaged or the development of bio-sensors. The polynucleotides and proteins are useful for preventing; treating or ampliorating disorders involving aberrant protein expression or biological activity. e.g. haematopoietic disorders, central/peripheral cor thunds, immune deficiencies and disorders, infectious diseases caused by viral, bacterial or fungal infection, autoimmune disorders, allergic contral, bacterial or fungal infection, autoimmune disorders, allergic polynucleotide sequences of the invention were assembled from BCTS isolated mainly by sequencing by hybridisation, and in some cases, care after this patent did not form part of the printed specification, but the printed specification, but were obtained in electronic format directly from VIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                114 CAAGGCCAGGGACCTGTGACCATGGAAGCAGAGAAGCAAGGCCACAGAGGCGTGGCCTG

                                                                                                                                                                                                                                                                                                    The invention comprises the amino acid and coding sequences of modulato of antigen receptor signalling (MARS) proteins. The MARS protein is a putative tumour suppressor gene and exhibits structural and sequence similarity to the Scr-like adaptor protein (Simb). The MARS DNA and protein sequences of the invention are useful for the treatment of myeloid malignancies (e.g. acute myelogenous leukaemia) autoimmune disorders, immunosuppression, myeloproliferative disorders and malignancies related to the de-regulation of tyrosine kinases (e.g. breast cancer). The present cDNA sequence encodes a mouse MARS protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SerTrpAspArg11eArgHisTyrArg11eHisCysLeuAspAsnG1yTrpLeuTyr11e

(I) is useful as hybridisation probes, polymerase chain reaction PCRN primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed activity of (II) is useful in gene therapy techniques to restore normal activity of (II) or to traat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptice in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) are useful for treating disorders

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          220
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            239
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GlyLeuArgGluSer-LeuSerPheTyrIleSer-LeuAsnAspGluAlaValSer-Leu 258
involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention comprises the amino acid and coding sequences of modulator of antigen receptor signalling (MARS) proteins. The MARS protein is a putative tumour suppressor gene and exhibits structural and sequence similarity to the Sor-like adaptor protein (SLAP). The MARS DNA and protein sequences of the invention are useful for the treatment of myeloid malignancies (e.g. acute myelogencus leukaemia) autoimmune disorders, immunosuppression, myeloproliferative disorders and malignancies related to the de-regulation of tyrosine kinases (e.g. breast cancer). The present cDNA sequence encodes a mouse MARS protein
                                                                                                                                                                                                              ss; gene therapy; modulator of antigen receptor signalling;

                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to novel human ORFX polypeptides and their coding sequences (ABP63631-ABP64681 and ABQ98194-ABQ99267). The sequences were discovered in human atherogenic cells, in particular in platelets and human umbilital vein endothelial cells (HVPEC) and are expressed in many other tissues as well. Atherogenic cells are cells which have the potential to develop atherosclerotic plaques. The ORFX polypeptides and nucleic acids are useful for treating or preventing a pathological condition associated with an ORFX-associated disorder, e.g. cancer, cardiovascular disease, allergy, autoimmune disease, wound healing, blood coagulation disorders of inflammatory disorders. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AsnileProSerValHisValGlyLysValSerHisGlyTrpLeuTyrGluGlyLeuSer 100
                                                                                                                                                                                                                                                                                                        New polypeptide designated ORFX are present in human atherogenic cells and are useful to prevent and treat ORFX-associated disorders including cancer, allergy, wound healing or autoimmune, cardiovascular or inflammatory disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Arcercricheageargeagacreagacgeageagrercreaagcagagagrar

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PGNs primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cutivity of (II) or to treat disease states involving districtions and its binding partners are useful for generating antibodies against it, detecting or quantitating a polypoptide in tissue, as molecular weight markers and as a food of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and the major and to produce other types of data and products dependent on DNA and aming a generate the sequences in the envisations are considered to the products dependent on DNA and and the products of the envisations of the products of the envisations of the envisations and to produce other types of data and products dependent on DNA and the major of the envisations of the envisations of the envisations of the envisations of the envisations of the envisations and the envisations of the envisations of the envisations and the envisations of the envisations and the envisations and the envisations and the envisations and products dependent on DNA and the envisations and the envisations and the envisations and the envisations and the envisations and the envisations and the envisations and the envisations and the envisations and the envisations and the envisations and the envisations and the envisations and the envisations and the envisations and the envisations and the envisati
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at

The present invention relates to novel human ORFX polypeptides and their coding sequences (ABP63631-ABP64681 and ABQ98194-ABQ99267). The sequences were discovered in human atherogenic cells, in particular in platelets and human umbilical vein endothelial cells (HUVEC) and are expressed in many other tissues as well. Atherogenic cells are cells which have the potential to develop atherosclerotic plaques. The ORFX polypeptides and numcleic acids are useful for treating or preventing a pathological condition associated with an ORFX-associated disorder, e.g. cancer, cardiovascular disease, allergy, autoimmune disease, wound healing, blood coagulation disorders or inflammatory disorders. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPPCO web site at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             243
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        209
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    229
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               63
                                                                                                                                            New polypeptide designated ORFX are present in human atherogenic cells and are useful to prevent and treat ORFX-associated disorders including cancer, allergy, wound healing or autoimmune, cardiovascular or inflammatory disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      150 IleHisCysLeuAspAsnGlyTrpLeuTyrIleSerProArgLeuThrPheProSerLeu

                                                                                                           T cell; gene; ss; differential expression; T cell activation; antiallergic; cytostatic; immunosuppressive; antimicrobial; gene therapy; allergy; cancer; graft versus host disease; infection; autoimmune disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention relates to the sequences of several cDNAs that are differentially expressed in activated T cells. The sequences of the invention may have antiallergic, cytostatic, immunosuppressive and antimicrobial activity and may be used in gene therapy. The invention also comprises a method for screening samples for differentially expressed genes and a method for detecting these cDNAs by hybridisation. The methods and compositions of the present invention are useful for diagnosing, treating, staging or monitoring treatment for allergy, cancer, chronic graft versus host disease, infectious and/or autoimmune disorders. The present sequence represents a CDNA of the invention that is differentially expressed in activated T cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           45 AlaGlyGlyProAlaGluLeuSerLeuArgLeuGlyGluProLeuThrIleValSerGlu 64

```
The sequence represents the coding sequence of molecule for disease detection and treatment, mddt14, shown by computer analysis to be similar to Str homology domain family of proteins. The sequence may be used for somatic or germline gene therapy. Gene therapy may be performed to: (i) correct genetic deficiency such as in severe combined immunodeficiency syndrome associated with adenosine deaminase (ADA) deficiency, cystic fibrosis, thalassaemias, familial hypercholesterolaemia and heemophilia caused by factor VIII or factor IX deficiencies; (ii) express a conditional lethal gene product (such as in the case of cancers which result from unregulated cell proliferation); (iii) express a protein which affords protection against intracellular parasites (for example, human retroviruses such as HIV, hepatitis B or C, fungal parasites such as Educiate albicans and Paracoccidioides brasiliensis, and protezoal

The present invention describes a method (M1) for screening for an antineoplastic agent. The method involves exposing cells to a chemical agent to be bested for anti-neoplastic activity, determining a change in comprises a sequence (S) selected from 8447 sequences (given in ABL61664 to ABL70110), or is at least 95% identical to (S), where a change in certivity and can be used in gene therapy. M1 can be used for screening an anti-neoplastic agent, and can be used for producing a product which, is the data collected with respect to the anti-neoplastic agent. M1 can be used for producing a product which, is can anti-neoplastic agent. M1 can be used in the treatment of cancer such properties of the agent. M1 can be used in the treatment of cancer such concerns of the agent. M1 can be used in the treatment of cancer such properties of the agent. M1 can be used in the treatment of cancer such as cancer, such as cancer, infiltrating lobular cancer, squamous cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous the concerned on the treatment of cancer squamous the cancer infiltrating and Wilm's the cancer cancer.
                                                                                                                                                                                                                                                                                                                                 Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.
                                                                                                                                                                                                                                     Horrigan S;

CDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer (5' GAGAGAGAAGACTTTTTTTTTTTTTTTTVTV 3'), cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cape-trapper. CDNA went through two rounds of normalization to Rot = 20.0 and subtraction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /protein id="Bab32223.1"
